

ABSTRACT OF THE DISCLOSURE

A woodwork drill having a drill bit 1 equipped with a tip screw 3 at the center of its tip, wherein three spiral leads 2 are formed on the drill bit 1, and raked blades 4 are respectively formed at the tips of the three spiral leads from the periphery toward the center. At the peripheries of the tips of the three spiral leads, scribing blades 5 are formed in such a way that they stick out forward of the raked blades 4. The cutting resistances acting on the drill balance at three points, making it possible to drill an accurate hole without shaking the drill bit.
